

Electronic Equipment for People with a Disability - Products For Communication, Play and Independent Living

Technical Solutions is recognised as Australia's leading supplier of special toys and other devices for sensory exploration, as well as communication devices and environment control equipment for independent living. Our product range is as diverse as the range of abilities our customers have.

Special Access Switches

Our extensive range of Switches and switch mounting systems are designed to enable a person with a physical disability to operate an electrical appliance or device.

Special Toys For special Kids

For a child with a disability, an adapted battery toy can be much more than play.

Our toys and sensory devices are modified so a Special Switch can be plugged in and the toy is operated by activating the external switch. When a child with a disability uses a switch toy for the first time, it is often the first time in his/her life that the child independently controls a device! And regular interaction with toys and sensory devices can be of significant benefit to a child's development.

Speech Output Communication Aids

Technical Solutions offer an extensive range of Communication Aids to suit the varying needs of people with a speech disability. Including devices to suit those with dexterity as well as speech disabilities.

Aged Care: Patient Monitoring, Fall Prevention & Access to Call Systems

People in supported accommodation have a right to communicate - to call for help when they are in need. Technical Solutions offer a range of call buzzers, pagers and hospital call interface devices to meet varying requirements. We also have bed/chair/room exit alarms that alert carers when the person is mobile.

Desire for Independence

One of the few things our Environmental Control clients have in common is a desire to independently operate the devices they use for daily living.

Make a phone call, send an email; turn on a light, fan or other appliances; change channels on the TV, even open doors. All done with the aid of remote controls that have been specially designed for accessibility.
