

### Big Switch Remote

#### **Big Switch Remote**

The **Technical Solutions Big Switch Remote** features a universal infrared remote control unit (URC 9050) which can be programmed to control most remote controlled devices. Televisions, VCRs, CD players, Stereo systems and environment control systems can be controlled by the **Big Switch Remote**.

The **Big Switch Remote** has twelve large soft touch switches that are both easy to see and easy to operate. These switches duplicate the functions of the standard small switches on the URC 9050.

#### **Setting Up The Big Switch Remote**

To set up the **Big Switch Remote** Simply follow the directions in the URC 9050 Owners Manual supplied with the Big Switch Remote, or available from our web site.

See the sections:

- USING THE URC 9050
- PROGRAMMING THE URC 9050

The twelve large switches on the **Big Switch Remote** have been labeled to represent the most commonly utilized functions of remote control units. Note however that this labeling does not limit the type of functions that can be programmed. Any switch on the **Big Switch Remote** can be programmed to perform any function.

See: **PROGRAMMING THE URC 9050**. Removable sticky labels can be used to re-label any switch that has been programmed to perform a function other than that specified by the original label.

#### **Care**

- Be sure **not to** use sharp or pointed objects to push the large switches as this may damage the plastic membrane.
- Clean the surface of the unit with a damp cloth; **do not** flood with water or any other fluid.

Instructions for training the Universal remote control (URC) are enclosed. If you require any further assistance with the use of the **Big Switch Remote** please contact Technical Solutions (03) 9737 9000.
